## Module 10 – Diagnostics and Fixes

### Demo:

In this demo, we will run various Diagnostic commands using mongo command line.

1. Run the mongod.exe and mongo.exe files.
2. To get the status of all the creation task, execute the following command and observe result:  
**db.runCommand( { buildInfo: 1 } )**
3. To know the current status of the server, execute the following command and observe result:  
**db.runCommand( { serverStatus: 1 } )**
4. To get log of all the activities performed, execute the following command and observe result:  
**db.runCommand({ getLog: "global" })**  
Note that you can run this command only for admin database.
5. To get log of the activities which encountered some warnings, execute the following command and observe result:  
**db.runCommand({ getLog: "startupWarnings" })**

This concludes the demo.
